Jason,

As we discussed earlier the homeowner at 722 W Buckley is adamant that sod was going to be placed around his home after discussion with EPA back in 2015. S&L was not part of that discussion and S&L has no record of that discussion and is not required to sod per our work order and our signed access agreement with the homeowner, and have attempted to explain that to the homeowner on multiple occasions to which he refers back to the original 2015 conversation and the signed access agreement to sample. After discussing with Taylor, S&L would request that the yard be sodded in order to complete this property in a timely manner and to try to alleviate any further issues in the future assuming EPA is willing to reimburse for the additional cost. S&L will ask the homeowner to sign off on an agreement before sod is placed stating that once the sod is down he will sign a closeout form for the property. S&L will still maintain the yard for 30 days and then the homeowner will be responsible for maintaining the property after that. Below is the square footage of the yard and the additional cost to sod. Please let me know at your earliest convenience if this is acceptable to EPA.

Total Square Footage: 12,782

Price for remediation including Hydroseed: \$47,932.50

Additional cost to sod at \$0.65 per square foot: \$8,308.30

Regards,

Jason England
